Hi,

Instructions are listed below.

Submit the code until 11/04/2022 – 16:00

Note: TZ = תעודת זהות

Create a registration form with fields: name, email, tz, date of birth and password.

store the data in local storage

show the data in a grid inside the html page

add ability to delete the accounts

inputs should be validated:

- Name: only A-Z ,a-z
- Email: validate for email pattern
- TZ: only numbers (bonus for implementing TZ algorithm)
- Date: only specific format,
- Password: should be encrypted,

show success message

don't store duplicates i.e., someone who has the same identifier

use only JS, CSS, html

code should be readable

don't use 3rd party libraries

For any questions you can call me

Robert – 0509064303

Good Luck (:
